SPRING REWIND HOSE REELS

Buckley Industrial Limited supplies a wide range of spring rewind hose reel which are designed to help with storage of the hose neatly and quickly.

Spring rewind reels automatically rewind requiring no power source. The operator is to guide the hose or cord as it self-retracts and wraps around the drum.

MANUAL REWIND HOSE REELS

We also supply a wide range of manual rewind hose reels. Direct crank uses a handle attached to the drum and one turn of the handle produces one turn of the drum. Direct crank hose reels can handle up to 60m of hose. It is possible to have more especially for thinner hose.

This method is extremely economical and perfect for long hose applications where no power is available. However this method can be physically intensive and therefore time consuming.

PORTABLE HOSE REELS

As well as Spring and Manual Rewind we can also supply a wide range of portable hose reels. They function well in the most harsh conditions and offer a clean and non-corrosive performance in applications such as food and chemical processing, offshore, marinas and in areas wherever rust, corrosion are likely.

When in motion all the weight of the reel and hose is directly over the axle, which saves labour, taking much less effort to move hose and reel from site to another.

BUCKLEY INDUSTRIAL

www.buckley-industrial.co.uk

Buckley Industrial is a distributor for some of the world's leading hose reel manufacturers including Coxreels, Koreel, Reelworks and Macnaught (Retracta). Offering a wide range of hose reels, including spring forward hose reels, manual rewind hose reels and portable hose reels for air, water, steam, fuel, oil, grease and welding applications for use in a variety of different environments, we believe we can always supply a reel that will meet or exceed our customers' requirements.

Hose Reels can be supplied with or without hose as well as additional fittings such as spray and filling nozzles. A major advantage of having your hose reel fully assembled by us is that the complete assembly can be tested using our highly advanced Hose Inspection & Testing facilities before being put into service. This will ensure there are no leaks from joints between the hose and the reel as well as reassuring our customers that the full assembly is fit for purpose.

The components on nearly all of the Hose Reels supplied can be varied, tailoring the unit to best suit customer requirements. This includes offering the reel with either spring or manual rewind functions and changing the position of the roller arm to allow a wide range of mounting options.

We can also supply bespoke hose reels to customer requirements.

BARRIER TAPE REEL

We also stock a new barrier tape reel for cordoning off areas for maintenance. Available in black/yellow or red/white woven, heavy duty fabric.

Some customers want to purchase these and mount them permanently at specific locations. Others want to keep a small number in the maintenance dept. and mount them when carrying out repairs or servicing.

Barrier tape reels are ideally suited to industrial and commercial situations where a safety barrier is required to prevent people from entering an unsafe or restricted area. The reels can be simply mounted on a wall, the barrier tape then can be pulled across the danger zone and finally hooked on the opposite wall. The tape can then be easily and quickly retracted when access is required. It can also be installed in areas that need cordoning off for maintenance or wherever access must be denied.

These reels come complete with a metal ring for hooking and they can also be equipped with the new patented SLOWMOTION system at an additional cost, which allows a safe and controlled rewinding of the tape.
