

Colour Coding of Hose

Coloured Heat Shrink

This product is available in a range of colours, making it ideal for easy identification of hose.

Hose can be covered in a specific colour to help identify what products are being passed through the hose or what type of hose is in use. A small section of hose can be covered or the full length of the hose, depending on customers requirements.

A premium grade thin wall polyolefin formulated to meet the most exacting specifications, this is a very flexible, flame retarded sleeving.

Available in a wide range of sizes up to 102mm diameter

Complies with MIL-1-23053/5 Class 1 and 2, DEF.STAN 59-97 type 2b, UL 224, and CSA specifications.

It has extensive applications for both protective and aesthetic purposes, with good chemical and solvent resistance and electrical performance.

Physical Properties

Material:	Cross-linked polyolefin
Flexibility:	Semi flexible
Colours:	Standard: Black, Red, Blue, Yellow, White and Clear Non-standard: Green, Violet

Thermal Properties

Operating Temperature:	-55°C to + 135°C
Shrinkage Temperature:	>120°C
Storage Stability:	Very Good
